

The above image shows our group's burndown from Sprint 3. The graph initially went up as the team added additional user stories to the active sprint. However, as the team continued to complete user stories this sprint, the graph once again decreased at the very end when we updated everything. It took everyone a while to finish up their tasks so everything was finished at the very end of the sprint. The velocity for this sprint was faster compared to Sprint 2. The team was able to complete more user stories this sprint. A couple user stories that are remaining will be moved to Sprint 4 because 2 of our members have dropped this course leaving us with only 4 members in this project.
