

# Sprint 2 Burdown

The above image shows our group's burndown from Sprint 2. The graph initially went down as the team completed user stories. There was a slight increase in the graph due to the adding of a user story. However, as the team continued to complete user stories this sprint, the graph once again decreased. The velocity for this sprint was faster compared to Sprint 1. The team was able to complete more user stories this sprint. A couple user stories that are remaining will be moved to Sprint 3.
